

SOPHIAN ABDUL RAHMAN

Software Engineer

Accra, Ghana | dx4336969@gmail.com | 0206192823 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Software engineer focused on building complete, secure systems. Shipped a full financial application suite for Republic Securities and solo-architected a complex real estate platform. Thrives when owning a product entirely, from the user interface down to the database and security layers. Knows how to partner with QA and management to get code through strict banking compliance, while concurrently leading a four-person startup engineering team.

SKILLS

Languages: TypeScript, JavaScript, Python, C#, HTML5, CSS3

Frontend: React.js, Next.js, Tailwind CSS, React Native, Framer Motion

Backend: Node.js, Express.js, REST APIs, WebSockets (Socket.io), ASP.net

Data & Cache: MongoDB, Mongoose, PostgreSQL, MSSQL, Redis, Supabase

Infrastructure: Docker, Kubernetes (concepts), Microservices, AWS, JWT Auth

Integrations & Tools: Paystack, Dojah KYC, Tuya IoT, BullMQ, Postman, Git/GitHub, Vercel

EXPERIENCE

Co-Founder & Lead Software Engineer

AncoreXHub · Accra, Ghana

Jan 2026 – Present

- Lead a four-person engineering team building WunkatHomes v2, a property management platform with separate Public, Tenant, Manager, and Admin portals on Next.js, TypeScript, and MongoDB.
- Added Paystack for subscription billing and Dojah for KYC checks, so new tenants and managers can be verified and billed without anyone on the team handling it manually.
- Wired in Tuya's IoT API so managers can lock, unlock, and monitor access points from the Admin portal instead of handling it on-site.
- Set up Redis and BullMQ to run background jobs — notifications, billing retries — outside the request cycle, and configured Nodemailer for transactional email.

Software Developer (National Service)

Republic Bank & Republic Investments · Accra, Ghana

Oct 2025 – Present

- Built the Republic Securities web app, admin portal, and backend, including endpoint-level authentication and role checks to keep financial data restricted to the right account types.
- Built a content and pricing portal for Republic Investments that lets non-technical staff update daily quoted prices themselves.
- Designed and shipped RepublicLunch, an internal ordering tool (Next.js, Tailwind) that replaced the team's WhatsApp-and-spreadsheet process with a single page that aggregates everyone's order automatically.
- Worked alongside QA and management through each release cycle so issues were caught before production and deployments stayed inside the bank's compliance process.

Freelance Full-Stack Engineer

Independent · Accra, Ghana

Jul 2025 – Present

- Took BKC Engineering's site from nothing to live: built the React frontend, registered the domain, moved DNS through Namecheap, and verified the site in Google Search Console.
- Built Dasaug, a real-time social platform for the Dagbon Students Association on the MERN stack with Socket.io, including role-based access so admins and regular members see different views.
- Built AFCITC, a responsible donation platform for a charity, with secure handling for both one-off and recurring payments.

PROJECTS

- RoadSafe — Final-year project pairing AI with GIS data to track and map road traffic incidents.
- Rammys Cosmetics — E-commerce storefront (React, Python, PostgreSQL) with a catalog that updates dynamically as stock changes.
- BingeBox — Cross-platform app (React Native, PostgreSQL) for tracking and watching movies and TV series.

EDUCATION

B.Sc. Information Technology

University of Ghana

Feb 2026
